

## EPnet™ EP3000 Vending Terminal

The EP3000 vending terminal is used to integrate vending machines and beverage dispensers into the EPnet cashless payment system.

Customers simply present their card to the reader, which recognises the account immediately and displays in an LCD window the account balance. Vended items may then be obtained and the cost debited directly from the account automatically and instantly. The LCD display gives clear details and instructions of every step of the transaction.

With larger vending machines the reader is fitted integrally, with the controller fixed to the coin mechanism mountings inside the machine. For smaller machines the EP3000 can be sited neatly alongside the equipment.

These units are automatically programmed by the PC and do not need to be individually adjusted. Price changes can be made from a central location without attending each machine individually. EPnet terminals are easy to support and are interchangeable between machines without any reprogramming required.

As with all EPnet equipment, the card technology used is the chosen technology of the customer, with EPnet able to operate using a wide variety of types and formats. (Refer to infosheet on cards).

### FEATURES

- ✓ LED display shows account balance and details the transaction
- ✓ Full audit trail, linked to PC giving a full sales analysis and valuable management information
- ✓ Automatic programming from PC –reduces administration
- ✓ Terminals are simple to service & can be swapped between machines without reprogramming.
