

EPnet EP7100 QubeLoader

The EP7100 QubeLoader is a simple way for staff to credit their accounts. It is specifically made to take cash payment (coin or notes) and load it into the user's account. It works like a bank cash machine, only in reverse. With this loader, the card is simply presented to the reader and coins and/or notes loaded into it. This amount is then added to the account. The bright, fluorescent read-out will verify the new balance. Units can be sited at a central point or

situated around the building at convenient locations. It will accept £5, £10 and £20 notes and coins from 20p to £2, although in practice, a lower limit of £1 coins is recommended. €5, €10 & €20 notes are accepted in the dual currency version.

The QubeLoader is networked to the Managers PC enabling live and comprehensive reports of use and cash taken to be available to the Manager at their desk.
